

ATTRIBUTES

`$hasRunComp`

Indicates that a run has been completed. It is reset in `reset()` and `hasRunComp()` is a combined getter/setter. It is set at the end of ``run_latex`` of the main module. It is read in ``run_onSuccessWarn`` because only if set, the TEX file has been scanned for ``pdfstandard`` and it is really known whether to verify.

TBD: In the long run, parsing

`%docMeta`

bla blubb

FUNCTIONS

`reset()`

Sets back ``hasRunComp`` and undefines ``docMeta``, ``metaPdfFlat`` and ``metaPdfXmp``.

`hasRunComp()`

A combined getter/setter for `$hasRunComp` Invoked without value returns the current value of the variable `$hasRunComp`, with a parameter, it is a setter.

`codMeta()`

A combined getter/setter for `%docMeta`
